TRIPLUS

Sistema di scarico a triplice strato ad innesto.

Push-fit triple layer waste and drainage system.

- ✓ Elevata resistenza agli urti anche a basse temperature.
- ✓ Buone caratteristiche fonoassorbenti.
- ✓ Resistenza ad un vasto range di composti chimici.
- ✓ Sistema di giunzione a guarnizione a singolo labbro preinserita.
- ✓ High impact resistance even at low temperatures.
- ✓ Excellent acoustic properties.
- ✓ Resistance to a wide range of chemicals.
- ✓ Factory-fitted single-lipped rubber ring jointing system.

Sistema a triplice strato per lo scarico *Push-fit triple layer waste and drainage system*

CARATTERISTICHE E PROPRIETÀ DEL SISTEMA

Triplus è la nuova linea di scarico al innesto realizzato con struttura multistrato. I sistemi basati su Triplus Valsir garantiscono:

- Elevata resistenza agli urti anche a basse temperature.
- Buone caratteristiche fonoassorbenti (grazie alle sue caratteristiche il sistema Triplus ha livelli di rumorosità di 12 dB(A) con portate di 2 l/s).
- Resistenza alle sollecitazioni meccaniche.
- Basse perdite di carico.
- Riduzione degli sfridi grazie alle varie lunghezze di tubi disponibili.
- Facilità e versatilità della posa in opera.
- Resistenza al passaggio di acqua calda conforme alla norma DIN 1986.

I tubi e i raccordi Triplus Valsir rispondono ai requisiti della normativa UNI EN 1451 e possono essere utilizzati all'interno dei fabbricati (area di applicazione B) adibiti ad uso civile ed industriale ed in particolare per gli scopi seguenti:

- tubazioni di scarico per il deflusso delle acque di scarico domestiche (bassa ed alta temperatura);
- tubazioni di ventilazione collegate agli scarichi indicati in precedenza;
- scarichi di acque piovane all'interno della struttura del fabbricato.

I bicchieri dei tubi e dei raccordi Triplus Valsir sono dotati di una guarnizione a singolo labbro alloggiata nell'apposita sede, premontata in fabbrica, e questo garantisce semplicità di innesto e ottima tenuta. Le guarnizioni rispondono per dimensioni, requisiti, tecnologia e frequenza di controllo alla norma DIN 4060 e garantiscono una durata pari a quella dei tubi e dei raccordi.

SYSTEM FEATURES AND PROPERTIES OF THE SYSTEM

Triplus is a new push-fit system with a multilayer structure. Systems installed with Valsir Triplus guarantee:

- *High impact resistance even at low temperatures.*
- *Excellent acoustic properties with a flow rate of 2 l/s, the Triplus system will generate a noise level of just 12 dB(A).*
- *Resistance to mechanical stress.*
- *Low pressure loss.*
- *Reduction of material wastage thanks to the range of pipe lengths available.*
- *Easy and versatile installation.*
- *Resistance to hot water in compliance with German Standard DIN 1986.*

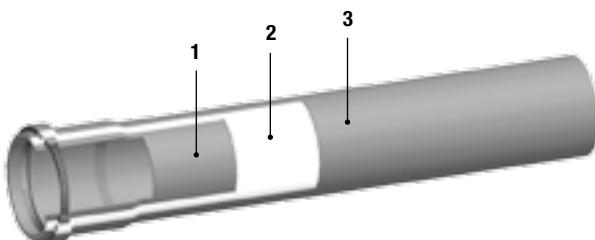

Valsir Triplus pipes and fittings meet the requirements of the European Standard UNI EN 1451 and can be installed inside buildings (B application area) intended for residential and industrial use and in particular Triplus is used for the following applications:

- *waste pipes for the drainage of waste water (low and high temperature) in residential buildings;*
- *venting pipes connected to the abovementioned drainage systems;*
- *drainage of rainwater inside the building structure.*

The sockets of the Valsir Triplus pipes and fittings are factory-fitted with a single-lipped ring seal that guarantees easy and leak proof joints. The seal dimensions, requirements, technology and control frequency thereof all meet the German Standard DIN 4060 and are equally as durable as the pipes and fittings.

Materiale

Il sistema Triplus Valsir è basato sull'utilizzo di tubi in triplice strato. Lo strato interno e quello esterno sono composti da polipropilene mentre lo strato intermedio è composto da polipropilene addittivato con carica minerale. Questa composizione garantisce le ottime performance del sistema sopra indicate.

Colore

Blu RAL 5015.

Marcatura

I tubi Triplus Valsir riportano:

- marchio del fabbricante;
- nome commerciale Triplus;
- l'indicazione del materiale (PP/PP - M/PP);
- il diametro esterno e lo spessore;
- l'indicazione dell'area di applicazione (B);
- l'indicazione del periodo di produzione;
- l'indicazione della linea di produzione;
- i marchi di prodotto.

I raccordi Triplus Valsir riportano:

- marchio del fabbricante;
- nome commerciale Triplus;
- l'indicazione del materiale (PP-M);
- i diametri esterni;
- l'indicazione dell'area di applicazione (B);
- l'angolo caratteristico (per le curve e le derivazioni);
- l'indicazione del periodo di produzione.

Material

The Valsir Triplus system is based on the use of triple-layer pipes. The internal and external layers are made up of polypropylene whereas the intermediate layer is composed of polypropylene loaded with mineral fillers. This composition guarantees the excellent performances mentioned above.

1. Strato esterno

Elevata resistenza all'urto anche a basse temperature.
Ottima resistenza agli agenti atmosferici.
Autoestinguente.

1. Outer layer

*Elevated impact resistance at low temperatures.
Excellent resistance to atmospheric agents.
Flame retardant.*

2. Strato intermedio

Conferisce rigidità al tubo.
Ottime caratteristiche antischiacciamento.

2. Intermediate layer

*Adds pipe rigidity.
Excellent resistant to crushing.*

3. Strato interno

Elevata resistenza meccanica e all'abrasione.
Grande scorrevolezza.

3. Inner layer

*Elevated mechanical and corrosion resistance.
Smooth surface.*

Colour

Blue RAL 5015.

Marking

Valsir Triplus pipes have the following markings:

- producer's trademark;
- the Triplus brand name;
- material specification (PP/PP - M/PP);
- the external diameter and thickness;
- application specification (B);
- production date;
- production line;
- quality approval logos.

Valsir Triplus fittings have the following markings:

- producer's trademark;
- the Triplus brand name;
- material specification (PP-M);
- external diameters;
- application specification (B);
- specific angle (for bends and branches);
- production date.

N.B. Per le modalità di installazione, caratteristiche tecniche, criteri di posa e progettualità si faccia riferimento al relativo manuale tecnico scarico Valsir "Sistemi di scarico all'interno degli edifici", L02-347.

For information on installation, technical specifications, and design criteria we recommend to consult Valsir technical manual "Waste systems inside buildings", L02-345.

CRITERI DI TRASPORTO E STOCCAGGIO**Movimentazione**

I tubi vanno sistemati in modo ordinato e razionale per il trasporto, curando che siano convenientemente appoggiati per l'intera lunghezza (distanziati se trattasi di tubi bicchierati) e che siano maneggiati durante le operazioni di carico e scarico in modo da evitare urti violenti, abrasioni, deformazioni.

In cantiere maneggiare i tubi e i raccordi con altrettanta cura e sempre in modo tale da evitare ogni possibile alterazione dei manufatti o inserimenti e sovrapposizioni di terriccio, ghiaia, fango o materiale estraneo in genere, in particolare sulle guarnizioni e all'interno dei bicchieri.

Stoccaggio

Immagazzinare i tubi in ambiente il più possibile protetto appoggiandoli su superfici orizzontali ed uniformi; fare in modo che appoggino convenientemente su traversine di legno o, in caso di tubi bicchierati, razionalmente sugli elementi dell'imballo se questo è allo scopo strutturato e realizzato con materiale consono come legno o plastica in genere.

Al fine di evitare deformazioni o alterazioni alla geometria dei tubi e dei bicchieri con conseguente possibile pregiudizio della funzionalità delle guarnizioni e quindi della corretta tenuta delle giunzioni, evitare la formazione, specialmente in caso di stocaggi prolungati, di cataste di altezza superiore a 1,70 m, quali che siano i diametri interessati. Non lasciare il materiale all'aperto ed esposto alla luce solare diretta per periodi eccessivamente prolungati (oltre 18 mesi).

TRANSPORT AND STORAGE CRITERIA**Handling**

Pipes shall be positioned in an orderly and rational manner for transport, making sure the entire length of the pipe is suitably supported (and suitably spaced when transporting socketed pipes) and care shall be taken during loading and unloading in order to avoid violent impacts, abrasions and crushing.

On the building site, the pipes and fittings shall be handled carefully to avoid any possible alteration to the products as well as the possibility of soil, gravel, mud or other foreign matter entering the pipes and seals inside the sockets.

Storage

Where possible the pipes should be stored in a protected environment where they are to be placed on horizontal and uniform surfaces; they should be suitably positioned on wooden supports or, when storing socketed pipes, these should be positioned on the packaging elements if suitably structured and made of an appropriate material such as wood or plastic in general.

In order to avoid deformation or alteration to the geometry of the pipes and sockets with the subsequent risk of compromising the correct functioning of the seals, care should be taken to avoid the formation, especially in the case of long-term storage, of stacks that exceed 1.70 m in height, whatever the pipe diameter. Do not leave the material in the open air and exposed to direct sunlight for excessively long periods (not any longer than 18 months).

CARATTERISTICHE DI FONOASSORBENZA

Introduzione

Il rispetto delle condizioni di benessere acustico nelle abitazioni, ma anche negli ambienti di lavoro, è diventato un requisito essenziale per garantire un buon stile di vita oltre al benessere psicofisico.

Nel 1997 Valsir ha iniziato una impegnativa attività di ricerca e verifica sulle capacità fonoassorbenti dei tubi destinati alla realizzazione di impianti di scarico all'interno degli edifici.

Il sistema Triplus è nato per resistere agli urti anche a basse temperature e garantisce delle buone caratteristiche di fonoassorbenza. Le proprietà dei materiali utilizzati permettono di ottenere buone prestazioni per ciò che riguarda la riduzione del rumore dovuto agli scarichi.

I test di verifica delle performance di Triplus sono stati eseguiti presso il Fraunhofer Institut für Bauphysik di Stoccarda, riconosciuto come il più autorevole laboratorio nel settore dell'acustica. Le prove svolte hanno comprovato le proprietà fonoassorbenti dei prodotti e la loro rispondenza ai requisiti legislativi e normativi.

Risultati

Le continue verifiche e miglioramenti effettuati sul sistema Triplus Valsir hanno portato a conseguire buone caratteristiche di fonoassorbenza, evidenziate nei risultati riportati nel diagramma.

La prova ed i risultati sono relativi ad un impianto realizzato con tubazione Triplus 110x3,6 secondo normativa EN 14366, utilizzando collari di staffaggio insonorizzati (certificato P-BA 227/2006).

SOUNDPROOFING CHARACTERISTICS

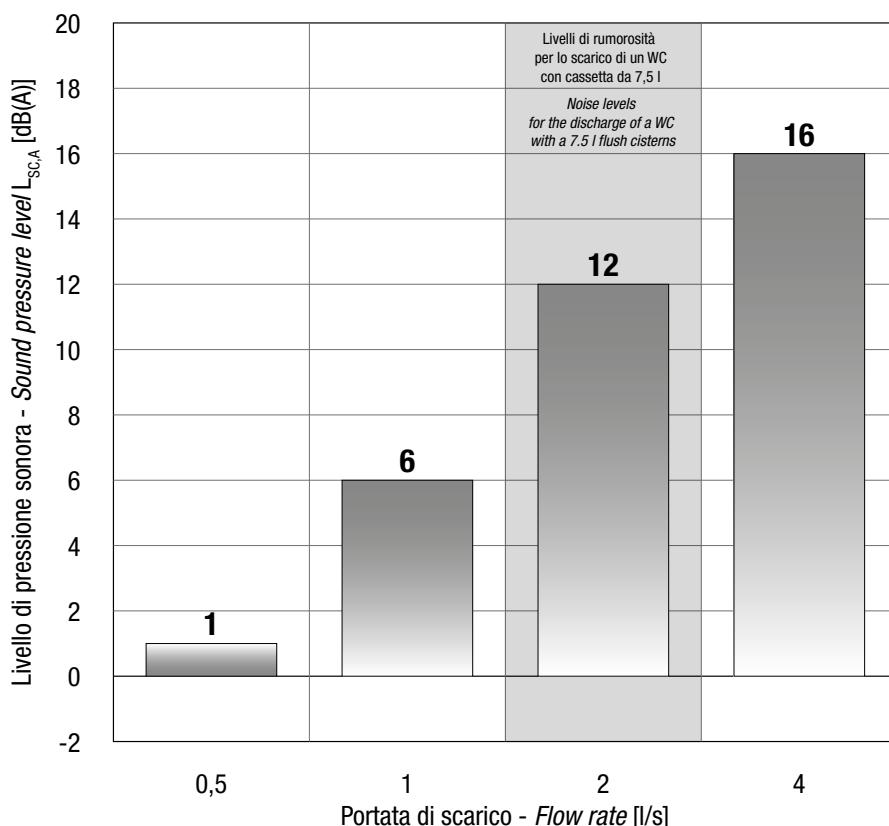

Introduction

The respect for the conditions of acoustic well-being in the house and in the workplace has become an essential requirement in order to guarantee a good quality of life. In 1997 Valsir started researching into the sound-insulating capacity of pipes used in the installation of waste and drainage systems inside the buildings. Beside being extremely resistant to impact even at low temperatures, Triplus system offers excellent acoustic performances as well, thanks to both the materials used to produce the pipe and how the system has been designed. The tests on the sound proofing properties of Triplus were carried out in the Fraunhofer Institut für Bauphysik in Stuttgart, Germany, one of the worldwide most highly regarded laboratories in the acoustic industry. The tests demonstrated the soundproofing capacity of the products and found them to be in complete compliance with the requirements of the standards and laws in force.

Results

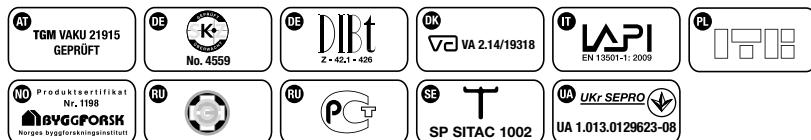

The ongoing analyses and improvements implemented on Valsir Triplus have increased its performance of Triplus, which can be seen from the results shown in the diagram.

The system used for testing purposes was installed with a 110x3.6 Triplus pipe in compliance with the European Standard EN 14366, and sound-insulated brackets (certificate P-BA 227/2006).

QUALITÀ CONDIVISA COMBINED QUALITY

Da sempre attenta ai principi di innalzamento dei livelli di affidabilità, Valsir ha introdotto per tutte le unità produttive e per tutti i processi di produzione il sistema di Qualità in conformità alla normativa UNI EN ISO 9001:2008.

Questo schema normativo ha ulteriormente valorizzato tutte le attività che concorrono alla piena soddisfazione del cliente, potenziando la formazione delle risorse umane al lavoro in Valsir, affinché vengano condivisi e raggiunti gli obiettivi di miglioramento stabiliti.

Valsir è attualmente concessionaria di oltre 151 omologazioni di prodotto in tutto il mondo (dato aggiornato al 23/12/2010), a garanzia del fatto che l'intera gamma di articoli risponde ai requisiti qualitativi richiesti dalle direttive. Valsir effettua numerose verifiche non richieste dalle normative ma indispensabili per garantire al cliente sistemi di assoluta eccellenza qualitativa. La verifica dei processi di lavorazione, i controlli sulle materie prime, le analisi di laboratorio, le prove di sforzo, le simulazioni d'installazione, gli investimenti tecnologici conferiscono valore aggiunto al know-how di Valsir.

Achieving higher and higher reliability has always been of great importance for Valsir and to do a Quality System in compliance with the UNI EN ISO 9001:2008 Standard has been introduced to manage all of the production units and production processes.

This regulatory scheme has further improved all the activities that contribute to the total satisfaction of the customer, strengthening the training procedures for Valsir staff so that the established improvement goals are shared and achieved by all.

Valsir currently holds over 151 product approvals around the world (datum updated on 23/12/2010), a guarantee of the fact that the entire range of products meets the quality requirements of the directives.

In addition Valsir carries out numerous tests that are not specifically required by the standards but are regarded as essential to offer to the Customers products of absolute quality excellence. Inspections of the manufacturing processes, tests on the raw materials, laboratory analyses, stress tests, installation simulations, and technological investments award added value to Valsir know-how.

Catalogo/listino
Catalogue/price list
L02-407/1

La Gamma Valsir - *The Valsir range*

PEHD

Sistema di scarico in polietilene ad alta densità a saldare.
High density polyethylene electro-fusion waste and drainage system.

Pexal

Sistema in tubazione multistrato per la distribuzione idrica.
Multilayer piping system for water supply.

SISTEMI RADIANTI RADIANT SYSTEMS

Sistema di riscaldamento e raffrescamento a pavimento.
Underfloor heating and cooling system.

PP

Sistema di scarico in polipropilene autoestinguente ad innesto.
Push-fit flame retardant polypropylene waste and drainage system.

Mixal

Sistema in tubazione multistrato per la distribuzione idrica.
Multilayer piping system for water supply.

CASSETTE FLUSH CISTERNS

Cassette di risciacquo e placche di comando.
Flush cisterns and push plates.

TRI PLUS

Sistema di scarico a triplice strato ad innesto.
Push-fit triple layer waste and drainage system.

Pexal easy

Gamma di raccordi per la distribuzione idrica.
Range of fittings for water supply system.

aria PUR

Sistema per il ricambio dell'aria in bagno.
Air renewal system for the bathroom.

SILERE

Sistema di scarico fonoassorbente ad innesto.
Push-fit soundproof waste and drainage system.

Pexal GAC

Sistema in tubazione multistrato per la distribuzione di gas combustibile.
Multilayer pipe system for the distribution of combustible gas.

valsir design

Placche di comando e sistemi doccia a filo pavimento.
Push plates and floor even shower systems.

SIFONI TRAPS

Gamma di sifoni in PP e PEHD.
HDPE and PP traps.

RAIN PLUS

Sistema di drenaggio sifonico delle acque meteoriche.
Siphonic rainwater drainage system.

Silvestro...

Software per la progettazione degli impianti idrotermosanitari.
Software for the design of plumbing and heating systems.
